

JACS Lean Startup Pitch

JACS: A Web-Based Rental Management System with CRM
Lean Startup Final Pitch (PDF Version)

Problem & Customer

Problem: Manual tracking of tenants, payments, and maintenance causes delays, lost records, and miscommunication.

Customers: Property Managers, Landlords, and Tenants in Cebu City

Key Assumptions

1. Property managers are willing to use a web system.
 2. Tenants will submit maintenance requests online.
 3. A centralized CRM improves communication and organization.
- Riskiest assumption: Users will shift from manual to digital systems.

MVP Description

The MVP includes: Property registration, Tenant management, Maintenance requests, Announcements, and Sub-domain per property.

Purpose: To test real usage of a centralized rental system.

Experiment & Results

Tested with 2 Property Managers and 5 Tenants.
Users added tenants, submitted requests, and viewed announcements.
Results: 6 out of 7 users found the system easy and useful.

Validated Learning

Users prefer centralized digital records.
Online maintenance requests are effective.
Some users need basic training.

Next Steps – Persevere

Decision: PERSEVERE

Next improvements: Mobile support, automated notifications, reports, security upgrades.
